LIVING CULTURE

STAFF REFERENCE GUIDE

Staff Button Reference

What each custom control does, where to find it, and how to use it.

> Omni + Gmail + Workflow
> Living Culture All-in-One
> Prepared 11 October 2026

Your daily workflow

1. Keep the all-in-one script enabled and sign in to Workflow.
2. Work in Cin7 Omni and use the **NZSO number** as the order reference.
3. Check the quote wording, products, quantities and fees before saving.
4. Complete the HubSpot step before downloading or converting a quote.
5. For fresh Workflow payment/dispatch information, reopen the order in Omni and refresh Workflow.

> **Scope**
>
> This guide covers the current custom tools, their related popup actions, and Workflow controls. Repeated Close/Cancel/Refresh controls are grouped; native Omni/Gmail controls are identified. Some controls depend on your role, document type or screen.

Opening Staff Guide in Omni 3

Omni: quote and order actions 4

Omni: quote wording and installation 5

Omni: product and stock tools 6

Omni: freight and reference sheets 7

Omni: email preparation 8

Gmail: quote documents and attachments 9

Omni: WeCom payment messages 10

Customer Photos: albums and uploads 11

Photo editor: mark up and save 12

Workflow: navigation and shared controls 13

Workflow: site visits 14

Workflow: quote review 15

Workflow: installation planning 16

Workflow: sign-off, follow-ups and install tools 17

Workflow: deliveries 18

Workflow: customer collections 19

Workflow: roster, logs and administration 20

Common actions

Save / Upload / Send: perform the action shown; wait for its result.
Close / Cancel / x: leave the current panel; not a substitute for Save.
Refresh: reload information, not save an edit.
Delete / Remove: read the confirmation and check the selected item.
Disabled or missing: check permissions, document type and prerequisites.

LIVING CULTURE

Opening Staff Guide in Omni

Tampermonkey | Top of the quote or sales-order action area

Staff Guide	Opens the Living Culture staff reference in a popup over the current Omni screen. **How to use:** Click Staff Guide on an Omni quote or sales order. Choose Using Omni for daily instructions or How Everything Connects for the connection diagram. Click Close or press Escape to return to your quote or sales order. Staff Guide is available without completing the HubSpot step.
Download PDF	Opens a printable copy of the staff guide. **How to use:** Use Download PDF in the guide toolbar to open the document, then use your browser or PDF viewer to save or print it. The online guide is the shared reference for staff.
Contents / Topic links	Jump directly to a section of the guide. **How to use:** Select a screen or topic in the contents. Use Contents in the toolbar to return to the topic list. Buttons can vary by screen, document type and staff permissions.
Search / Clear search	Find button instructions by name, task or screen. **How to use:** Type in Search help to filter the instructions as you type. Use the clear icon or Contents to show all topics again. Search includes button names, descriptions and instructions.

> This guide explains everyday tasks in Omni, Gmail and Workflow. The orange Add Quote label in Gmail is a pointer to the paperclip, not a clickable button.

LIVING CULTURE

Omni: quote and order actions

Tampermonkey | Main coloured action row

Site Visit	Opens a new site-visit booking with details taken from the current Omni document. **How to use:** Check Visit By, branch, date, time, address and products. Visit By defaults to the quote creator when a matching rep is available. Click Book Site Visit. Creates a Workflow booking; does not convert the quote.
Quote Review / Send Review	Sends the current quote into the Workflow review queue. **How to use:** Click Quote Review, check the summary, add any optional notes, then click Send Review. Wait for Review Sent or Review Updated. This is a review request, not a HubSpot deal.
HubSpot Deal	Creates or finds the HubSpot deal for the current quote and sends its quote information. **How to use:** Save the quote first. Click HubSpot Deal, complete any lead-source prompt, and wait for the result. Check the returned deal link. The result reports deal creation and order association separately. Read the confirmation before continuing.
Download Quote	Downloads the PDF for the chosen quote template. **How to use:** Complete the HubSpot step first. Click Download Quote, select Quote or Custom Quote, and wait for the PDF download. The PDF follows the corresponding native Admin template link.
Clone Quote	Uses Copy All Items to create and automatically save a new quote. **How to use:** Save changes to the original first. Click Clone Quote once. A loading indicator appears while cloning runs in the background; the saved clone opens when complete. If cloning times out, check the quote list before trying again to avoid duplicates.
Convert to Sales Order / Convert	Converts the existing quote into a sales order. **How to use:** After the HubSpot step, click Convert to Sales Order. Save unsaved changes first, then confirm with Convert. Enter confirms; Escape cancels. This changes the document type. It is not the same as Clone Quote.
Download Invoice	Downloads the sales order PDF using Dynamic Invoice. **How to use:** On a sales order, click Download Invoice and wait for the file. Check the customer, items, payments and invoice date before sharing. It does not use Quote or Custom Quote as a fallback.

> Quote-only actions can disappear on sales orders. Download and conversion controls depend on the HubSpot gate and the current document type.

Omni: quote wording and installation

Tampermonkey | Beside Delivery Instructions and below line items

Quote Memo Info	Shows the standard quote-memo wording in compact, clearly headed sections. **How to use:** Open it and choose the section appropriate to the order: installation required, no installation, pre-sale, in-stock or custom-made terms. Select the correct installation wording before relying on automatic assembly fees.
Copy (quote memo)	Copies the selected memo to the clipboard. **How to use:** Click Copy under the required section, then paste it into the intended field or email. Copy alone is not the same as filling Delivery Instructions.
Fill Delivery Instructions	Inserts the selected memo into Omni Delivery Instructions and copies it. **How to use:** Click under the correct memo. Review the filled text, add ETA, dimensions or other customer-specific details, and save the Omni document. The field expands to show more of the inserted text.
Install Fees	Opens the current installation-service price list for manual selection. **How to use:** Search by service, code or price. Check the model, mounting type and size band, then click Add beside the correct fee. Check quantity and price after insertion; save the document.
Add (installation fee)	Adds the selected assembly/installation service as a line item. **How to use:** Use only when a manual fee is needed or the automatic match is unsuitable. Review the completed product line before adding another. Automatic matching already handles supported pergolas and blinds when the memo requires installation.
Custom Comments / Copy / Fill comments	Builds product-specific comment text from the selected options. **How to use:** Open Custom Comments, complete the relevant choices, then Copy or Fill comments. Check the correct line and save. Copy is clipboard-only; Fill comments writes into the detected Omni comments field.
Pergola Guide / Clear selections	Shows the pergola modification guide and a minor-modification estimate. **How to use:** Choose the applicable modification types and read the resulting estimate. Clear selections resets the guide. This is a guide; verify the quote lines and price separately.

> Automatic installation matching uses pergola model, freestanding/wall-mounted type and area (for example 4 x 3 = 12 m2), or blind width. It runs only when the quote memo requires installation.

LIVING CULTURE

Omni: product and stock tools

Tampermonkey | Product shortcuts above the line-item grid

Product category buttons	Open the product selector or corresponding product range. **How to use:** Use Tasman, Atlantic, Baltic, Caspian, Blinds, Gas Fire Pits, Teak Sofa, Aluminium Sofa, Dining Tables, Dining Chairs, Bar Furniture, Cantilever Umbrellas, Outdoor Grills, Awnings or Patio Covers. Choose the exact product/options shown. Blinds: mounting, operation, blind, wall mounting (if offered), then size/colour. Check the SKU.
Copy SKU (Living Culture website)	Copies the SKU of the selected product variant. **How to use:** Choose the model, size and colour on the product page, then click Copy SKU. Paste the code into an Omni line and complete the native product selection. A copied SKU is not a saved quote line.
Custom Products / Add	Opens the custom-product list and inserts a selected SKU. **How to use:** Search the name, SKU or notes, verify its price and description, then click Add. Check the completed line in Omni. Save the quote after changing line items.
Refresh (Available Stock)	Rechecks stock for the quoted physical products. **How to use:** Click Refresh below the line-item grid and wait for the checked-product result. Compare Quote Qty, Stock Avail and Shortfall. Assembly/service lines are excluded. Availability does not reserve stock.
Open Products	Opens the native Omni products area for further inspection. **How to use:** Use it from Available Stock when you need more detail on a SKU or branch stock. The Available Stock panel now loads automatically; the old NZ Availability button was removed.
Foshan Warehouse / Refresh	Opens the China warehouse stock view. **How to use:** Click Foshan Warehouse, inspect the stock information, and use Refresh in that view when required. China warehouse stock is not the same as NZ available stock or a promised delivery date.
LC Containers	Opens the live container tracker. **How to use:** Click LC Containers and look up the relevant shipment/container. Allow the popup if your browser blocks it. Use this for shipment context; confirm customer ETAs before quoting them.

> The automatic Available Stock table shows physical products only. Installation fees and delivery charges should not be treated as stocked products.

LIVING CULTURE

Omni: freight and reference sheets

Tampermonkey | Freight Costs beside freight fields; reference-sheet tools

Freight description	Choose or type a shipping or collection description. **How to use:** Select a suggestion or type your own wording, then save in Omni. Freight Costs still fills both fields. Editing changes only the description.
Freight Costs	Opens the freight calculator using detected quote products and address. **How to use:** Check the detected SKUs, quantities and delivery address. Review the freight result and delivery method before using it. An incomplete address or wrong quantity can change the result.
Refresh freight with these quantities	Recalculates the detected-product freight estimate. **How to use:** Adjust the quantities shown in the freight panel, then click this button and wait for the updated result. This is not a stock refresh.
Add another product / Remove (freight)	Changes the product list used for a manual freight estimate. **How to use:** Add each relevant SKU and quantity. Remove an entry if it should not be included, then recalculate. These controls edit the calculator list; check the actual quote separately.
Get freight manually	Calculates freight from the manually entered products and address. **How to use:** Enter all products/quantities and select the correct address suggestion, then click Get freight manually. Use this when the quote is incomplete or automatic detection needs checking.
Promo Summary	Shows current promotions and promotions beginning tomorrow. **How to use:** Open the summary and use its search/filter controls. Read the dates and any Starting tomorrow label before applying an offer. A preview of tomorrow's promotion does not make it active today.
Clearance Info / New Products	Open the relevant reference sheets for clearance and new-product information. **How to use:** Open the sheet, search for the product and inspect its details. Use Refresh in the sheet if the list needs updating. Treat these as reference information; verify price and stock in Omni.
HubSpot (shortcut)	Opens HubSpot without running the quote-to-deal creation action. **How to use:** Click HubSpot when you want to search or inspect CRM records directly. Use HubSpot Deal, not this shortcut, to run the quote integration.

> Some reference tools appear only on supported screens. Do not confuse a reference-sheet value with saved stock, invoice or payment data.

Omni: email preparation

Tampermonkey | Email helper / supported Omni email screens

Copy Email	Copies the prepared email content. **How to use:** Choose the appropriate email/template, check the recipient and message, then click Copy Email and paste where needed. Review attachments independently; copying text does not attach PDFs.
Copy to Cin7	Transfers the prepared message to the supported Omni email form. **How to use:** Prepare the message, click Copy to Cin7, then review the recipient, subject and content in the destination. The button retains the Cin7 label even though this workflow uses Omni.
Open Gmail	Opens Gmail with the prepared email content. **How to use:** Click Open Gmail, check the resulting compose window, add the required attachments and send from Gmail. Opening Gmail does not send the message.
Quote PDF / Add to email	Selects quote PDF documents for the supported email helper. **How to use:** Open the quote selector, choose the required document(s), then click Add to email. Wait for the added result and inspect the attachment list. Use the correct NZSO quote and avoid adding older or duplicate PDFs.
Drawings / Add to email	Adds selected drawing files through the email helper. **How to use:** Choose the product folders/options, select the drawing(s), then click Add to email. Confirm the drawing size, mounting and product match the quote.
Care Guides / Add to email	Adds selected care-guide PDFs through the email helper. **How to use:** Tick the relevant guide(s), then click Add to email. Check the attachment list before sending. For Gmail directly, use the separate Gmail controls on the next page.

> Omni's native Save & Email opens the email workflow; it is not a new custom button. Always check the final recipient, subject and attachments before sending.

Gmail: quote documents and attachments

Tampermonkey | Compose/reply toolbar, beside the paperclip

Drawings	Opens the Living Culture drawing selector. **How to use:** Open a compose or reply first. Click Drawings, choose the folders/options and select the required drawing. This tool does not send the email.
Attach to Gmail (drawing)	Downloads the selected drawing and attaches it to the current compose window. **How to use:** After selecting the drawing, click Attach to Gmail. Wait for the attachment to appear before continuing. If the attachment input is not found, click the Gmail paperclip once, cancel the file chooser if needed, then retry.
Care Guides / Attach	Lets you select and attach one or more care-guide PDFs. **How to use:** Click Care Guides, tick the relevant files, then click Attach (the label may include a count). Check every attached filename. Refresh reloads the available guide list.
Add Quote -> (orange label)	A visual hint pointing to Gmail's normal attachment paperclip. **How to use:** Click the paperclip to the right of the label and select the downloaded quote/invoice PDF from your computer. The orange label itself is not clickable.
Quote PDFs / Attach selected	Where available, opens the Omni quote-PDF selector/cache. **How to use:** Click Quote PDFs, tick the intended quote PDF(s), and click Attach selected. Check the NZSO number and filename. This is a separate quote-PDF selector, not the orange paperclip hint.
Send (native Gmail)	Sends the email after your final review. **How to use:** Include the relevant NZSO number in the subject when deal matching is required. Check recipient, wording and attachments, then send. NZSO/SFOR matching supports HubSpot attachment logging. Ordinary unrelated emails should not produce a missing-quote-number warning.

> Drawings and Care Guides sit together to the left of the Add Quote hint on the same toolbar row. HubSpot attachment logging is separate from creating or associating the deal.

Omni: WeCom payment messages

Tampermonkey | Sales-order payment section, beside Add a new payment

Send as	Opens the shared staff/rep list for a payment notification. **How to use:** First enter a valid payment against the correct NZSO order. Click Send as and select the staff member the message should be sent as. Selecting a person opens a confirmation; it does not immediately send.
Staff name (Send as menu)	Builds the payment message with the selected sender details. **How to use:** Choose the correct rep from the list, then inspect the order, customer, amount and payment details in the preview. Choose the person responsible for the transaction, not an arbitrary available name.
Send to WeCom	Sends the reviewed payment message to the configured NZ Payment Notification group. **How to use:** Edit the preview if necessary, then click Send to WeCom once. Wait for success before closing or retrying. This is a real external message. It does not take payment or create a refund.
Cancel / x (payment preview)	Closes the preview without sending a payment notification. **How to use:** Use Cancel or the close icon if the amount, order or selected staff member is wrong. You can reopen Send as after correcting the details.
Save (native Omni, enhanced)	Saves the sales order; the helper fills a blank Invoice Date before saving. **How to use:** Check payment entries and order details, then click Save. Verify that Invoice Date and the payment are retained after the save. Existing invoice dates are not overwritten.
Invoice Date after successful Send as	An automatic helper action, not an additional button. **How to use:** After a successful WeCom send, inspect the newly filled Invoice Date and save the sales order so it persists. Payment status then syncs from Omni amounts, not from the act of sending WeCom.

> Do not click Send to WeCom repeatedly during a slow response. Check WeCom Log and the destination group before retrying an uncertain send.

Customer Photos: albums and uploads

Omni photo controls and the Workflow Customer Photos page

Upload Photos (Omni)	Uploads customer photos and links the album to the current NZSO document. **How to use:** Click Upload Photos near Created By / Processed By, choose the images and finish the upload. Wait for success, then use View Album. Check the customer and current NZSO number before uploading.
View Album / View Albums (Omni)	Open the current linked album or the searchable album collection. **How to use:** Use View Album for this order; use View Albums to find another album. Select a thumbnail to view or mark up a photo. One album can be linked to several quotes/jobs without copying each photo.
Customer Photos / Search (Workflow)	Open the customer-album page and find an album. **How to use:** Click Customer Photos, enter a customer, email or address and click Search. Choose the matching album from the left list. Permissions may allow viewing without editing.
+ New photo album / Create album	Create a customer album. **How to use:** Click + New photo album, enter the customer details and linked NZSO numbers, then click Create album. Use an existing album when the customer already has one.
Save changes	Save album metadata and linked quote/job numbers. **How to use:** Edit permitted details and the Linked numbers field, then click Save changes. Linking an NZSO number lets related site-visit photos appear in the same album.
Upload / Open & mark up	Upload files into the selected album, or open an existing photo editor. **How to use:** Choose files and an optional caption, then click Upload. Click Open & mark up on a photo to annotate it. The album page advertises a maximum of 10 MB per image; upload errors should be checked before retrying.
Remove / Delete album / Back to Workflow	Remove a photo, delete an album where authorised, or return to the planners. **How to use:** Read the confirmation carefully. Removing a shared site-visit photo removes that same photo from both views. Back to Workflow only changes screens. Delete album is restricted. It is not the same as removing one photo.

> Site-visit uploads now appear automatically in Customer Photos when the album includes that NZSO number. Refresh/reopen the album before re-uploading a file you already uploaded.

Photo editor: mark up and save

Omni and Workflow | Inside Mark up photo

Select / Move	Selects and adjusts an existing annotation. **How to use:** Click Select / Move, then select a line or note. Drag an end handle to change the line, or drag its middle to move it. Moving an annotation does not alter the original photo.
Measurement	Draws a labelled measurement line. **How to use:** Click Measurement and drag between the two points. Enter the measured value and units, then confirm the label. The tool records your supplied measurement; it does not calculate real-world dimensions from the photo.
Line	Draws a plain line annotation. **How to use:** Choose Line, select a colour if needed, then drag from the start point to the end point. Use this for highlighting edges or positions.
Text Note / Colour	Adds a written note or sets the annotation colour. **How to use:** Click Text Note, choose the position and enter the note. Use the Colour swatch before drawing the next annotation. Keep the photo readable and include units on dimension notes.
Confirm label (tick) / Cancel label (x)	Accepts or discards the text for the annotation being added. **How to use:** Type the label and click the tick or submit it. Click x or press Escape to abandon that label. Finish or cancel an open label editor before saving.
Undo / Delete selected / Clear	Remove the latest mark, a selected mark, or all current marks. **How to use:** Use Undo for the last annotation; select a mark before Delete selected; use Clear only when you want to start again. Clear applies to unsaved annotations, not to the stored original image.
Save annotated copy / Close	Save a separate annotated image, or exit the editor. **How to use:** Finish your annotations, click Save annotated copy and wait for success. Confirm the new image appears in the album before closing. The original remains. Large annotation exports are compressed to help avoid oversized-upload errors.

> Closing the editor is not the same as saving. If you see an upload error, keep the editor open, check the failure and do not assume the annotated copy was saved.

Workflow: navigation and shared controls

Workflow | Top navigation and job drawers

Site Visit / Quote Review	Open the visit planner or quote-review queue. **How to use:** Choose Site Visit to book/manage visits; choose Quote Review to inspect and approve/reject submitted quotes. Changing tabs does not convert an Omni document.
Deliver / Install / Collect	Open the corresponding fulfilment planner. **How to use:** Use Deliver for delivery routes, Install for installation scheduling, and Collect for customer collection jobs. A sales order may be linked to more than one planner.
Jobs Overview / Details	Find an existing job and its progress across Omni, Workflow and HubSpot. **How to use:** Open Jobs Overview, search the NZSO/customer and click Details beside the intended result. The Omni progress strip already shows the current job; Jobs Overview opens the full permitted list.
More	Opens additional reporting, history and administration tools. **How to use:** Click More, then choose the required log, history, roster or permitted report. Some entries are hidden by your role or permissions.
NZSO number / Open Deliver Card / Install link	Open the linked Omni order or related planner card. **How to use:** Click the NZSO number for the Omni document. Use Open Deliver Card or the Install link to inspect the related Workflow job. Check the linked number rather than relying on a customer name alone.
Details / Notes / Photos / History / Emails	Switch the content shown inside a job drawer. **How to use:** Open a job, then choose the relevant drawer tab. Upload/save actions are inside the corresponding tab. History helps establish who changed a booking or status.
Close / x / Cancel / Refresh	Close a view, abandon an action, or reload the visible list. **How to use:** Use a Save/Upload/Send action before closing when needed. Refresh reloads data; it does not save edits. The same labels are reused in many panels; check which panel is active.

> Workflow uses stored Omni snapshots. Reopen the sales order in Omni to supply fresh data, then refresh Workflow. Core planner imports and webhooks no longer supply order updates.

Workflow: site visits

Workflow | Site Visit tab and individual visit cards

Book Site Visit / Clear	Create a new visit, or clear the new-visit form. **How to use:** Choose Visit By, branch, date/time and customer/NZSO details, then click Book Site Visit. Clear resets the form without booking. When started from Omni, confirm the prefilled quote creator and details.
Branch buttons / Compressed View	Filter the visible visits by branch and change their display density. **How to use:** Choose the relevant branch. Toggle Compressed View to see more visits in the planner. Display/filter changes do not delete bookings.
Start Checklist / Open Checklist	Start or reopen the site-visit checklist. **How to use:** On the visit card, open the checklist and complete the relevant questions, measurements and notes. Finish the checklist using its save controls. Reopen the same checklist to continue instead of creating another visit.
Print Form / Print Filled	Open a printable site-visit form or the completed form where available. **How to use:** Choose the print action on the visit or related review, check the contents, then use the browser print dialog. Print Filled is available from linked review/checklist views.
Photos / Choose files / Upload Photos	Upload images against that site visit. **How to use:** Open Photos on the correct visit, select one or more files, optionally add a note, then click Upload Photos and wait for success. Related Customer Photos albums display these files when the NZSO number is linked.
Refresh / Open / Delete (visit photos)	Reload the photo list, open a photo, or delete a permitted photo. **How to use:** Refresh after uploading. Use Open to inspect the image. Delete only after verifying the selected file and confirmation. Deleting a shared photo affects its site-visit and customer-album views.
Delete (site visit)	Remove the visit booking from the live planner. **How to use:** Click Delete on the correct visit and confirm. Check the planner/history afterward. Deletion now stays removed across reloads and stale browser saves.

> Dragging a visit card changes its scheduled day. Confirm the new date after the planner finishes saving. Photo upload and booking deletion are separate actions.

Workflow: quote review

Workflow | Quote Review tab

Import	Attempts to import the supplied NZSO quote from stored Omni data. **How to use:** Open the quote in Omni first. Enter its NZSO number in the review import area, then click Import and read the result. An already existing review may be reported rather than duplicated.
Approved (checkbox)	Records the reviewer's approval decision. **How to use:** Inspect quote details, checklist and photos before ticking Approved. Add appropriate approval notes. Available only to authorised reviewers. Review approval and CRM order association are separate steps.
Not approved (checkbox)	Records that the quote needs correction. **How to use:** Write the reason or solution in the review notes, then choose Not approved. Read any status/notification result. Be specific about what the rep must change.
Recheck control	Requests another review after a rejected quote has been corrected. **How to use:** Update the Omni quote first, then use the recheck control on the rejected review where available. Do not mark a quote approved just to avoid the recheck process.
Photos / Start Checklist / Open Checklist / Print Filled	Open the photos and linked site-visit evidence used for review. **How to use:** Use Photos to inspect the customer/site images. Open the linked checklist or print its completed content. These controls help the decision; they do not change the quote price.
Delete / Quote Review History	Remove a permitted review card, or inspect previous review activity. **How to use:** Delete only the intended non-approved review where allowed. Use More > Quote Review History to inspect earlier decisions. Check the NZSO number before removing anything.

> The Omni Quote Review button submits the request; the Workflow decision controls are where authorised staff review it.

Workflow: installation planning

Workflow | Install tab and scheduled install cards

Import / Internal / External	Import stored Omni jobs and choose the install-planning scope. **How to use:** Open the sales order in Omni, enter the NZSO number and click Import if needed. Choose Internal or External to view the relevant install lane. An existing card should be found rather than imported repeatedly.
Compressed View / Monthly View / Team + and -	Change the calendar view or open/close a team lane. **How to use:** Choose the view that suits scheduling. Use the team + button to expose a lane and - to close an available lane. Drag a job into the intended day/team, then verify its saved date and time.
Reserve Time / Select days / Reserve Time (confirm)	Blocks calendar time for non-job work or unavailable time. **How to use:** Open Reserve Time, choose day(s), team, time and details, then confirm. Use the calendar arrows to change month. Reserved time is separate from a customer install booking.
Split job / Copy	Split install work, or create a follow-up copy where that action is offered. **How to use:** Use Split job when work needs separate scheduled portions. Use Copy only on cards where a follow-up copy is appropriate; inspect the resulting card. Neither action is the Omni Clone Quote button.
Notes / Install Notes / Save Notes + Notify Sales	Open job notes or installation-specific notes. **How to use:** Choose the required notes view, edit it, then use its Save action. Save Notes + Notify Sales also requests a sales notification. Saving notes can send WeCom; read the action label before clicking.
Install team confirmed / Sales confirmed booking / Install completed	Track installation readiness, customer booking confirmation and completion. **How to use:** Tick only after the relevant step is actually complete. Sales confirmed booking sends the configured install-team WeCom notification on a new tick. Unticking then reticking can send another confirmation. Check WeCom Log before retrying a missing notification.
Paid / Part Paid / In Stock / Stock Onsite	Show payment, stock availability and physical onsite readiness. **How to use:** Use Omni to correct payment and stock data. Inspect Stock Onsite through the linked delivery controls and confirm actual delivery where permitted. Omni-derived values can be restored by sync; manually completed deliveries remain protected.

> Installation bookings now persist across save/reload. Booking a date, confirming the customer and marking the installation completed are different steps.

Workflow: sign-off, follow-ups and install tools

Workflow | Install cards and Install More tools

Sign-off	Opens the customer completion/signature form. **How to use:** Open Sign-off for the correct job, complete the requested details and have the customer sign where appropriate. Do not use it before the agreed work is ready for sign-off.
Clear signature / Save customer sign-off	Reset the current signature or save the completed sign-off. **How to use:** Use Clear signature for a mistaken signature. Review the form and click Save customer sign-off when complete. Close/Cancel do not replace the save action.
Install follow up / repair / Create follow up	Create a follow-up or repair request linked to an install. **How to use:** Click the follow-up action, describe the work and click Create follow up. Assigned-rep permissions may apply. Use a clear description of the remaining work or fault.
Follow-up / Book follow up / repair	Open follow-up work and schedule a request. **How to use:** Choose Follow-up in the install tools, find the request and use Book follow up / repair to set its booking. Booked indicates the request already has a booking.
Times / Team tabs	Open installation timing information by team. **How to use:** Choose Times, then the relevant team tab and inspect the recorded timings. Viewing times does not itself book a job.
Bulk Areas / Apply	Assign install areas to the selected planning scope. **How to use:** Open Bulk Areas, choose the relevant dates/teams/area and check the scope before clicking Apply. This can affect multiple planner entries.
Delete (reserved time or authorised job card)	Remove a time reservation or an authorised planner card. **How to use:** Verify the selected item and read the confirmation before deleting it. Deleting a Workflow card is not cancelling or deleting the Omni sales order.

> Use WeCom Log to investigate notification results. Job notes, installation notes, photos and customer sign-off are separate records.

Workflow: deliveries

Workflow | Deliver tab, routes and delivery drawers

Import	Imports an NZSO order from the Omni snapshots already stored in Workflow. **How to use:** Open the sales order in Omni first. Enter its NZSO number in Omni Import, click Import and read the result. If it already exists, search booked and delivered results before trying again.
Open Delivery	Opens an existing search result, including a booked or delivered job. **How to use:** Search the NZSO number and click Open Delivery in the matching result. Read its current date, team and status. This avoids creating a duplicate when the card is outside the unbooked list.
Condensed View / Times / Team + and -	Change delivery display density, inspect timing and open/close route lanes. **How to use:** Choose the desired view or team. Drag an unbooked delivery into the correct route/day and verify its saved booking. Use the search filters if the job is not visible in the current lane.
Notes / Save Notes	Edit delivery-specific notes. **How to use:** Open Notes on the intended card, record access or delivery instructions, then click Save Notes. These are Workflow notes, not a replacement for saving Omni quote changes.
Install (linked delivery card)	Opens the related installation for a delivery with linked assembly work. **How to use:** Click Install on the booked delivery card, then inspect the installation date and requirements. Assembly lines do not need to appear as separate physical delivery products.
Undelivered / Delivered time	Manually records or reviews a delivery completion. **How to use:** Only mark delivered after physical delivery. Click the status action on the booked card and verify the resulting status/time. Manual completion is preserved; automatic Core-derived completion is corrected against Omni.
Paid / Part Paid / Photos / Upload Photos	Inspect payment status and record delivery photos. **How to use:** Correct payment amounts in Omni. For photos, open the drawer Photos tab, choose files and click Upload Photos. Refresh the list and check the files before leaving.

> Packed turns green when Omni Stage is Fully Packed. Ship descriptions route orders to Deliver; assembly also creates an Install job. Invoice Date alone is not dispatch.

Workflow: customer collections

Workflow | Collect tab and collection cards

Import	Imports the matching stored Omni order into the collection workflow when applicable. **How to use:** Open the Omni sales order, enter its NZSO number in Collect import, then click Import and inspect the result. Do not import a delivery job into Collect simply because it is difficult to find.
Picked / packed control	Records collection-readiness through the collection workflow where available. **How to use:** Confirm the physical goods are ready before using the control. Read any permission/status response. Core fulfilment updates are disabled; do not expect this to write back to Core.
Collected control	Records that the customer has collected the goods. **How to use:** Verify the correct NZSO and customer before marking collected. Review the saved status and timestamp. Showroom collection fills Fully Dispatched (2) when the matching Omni order is open. Save in Omni to keep it.
Customer going to warehouse now	Sends the warehouse collection notification where the control is available. **How to use:** Verify the order, products and rep, then use the corresponding collection event/control once. This is a real WeCom notification; product details now come from Omni snapshots.
Notes / Save Notes	Edit notes for the collection job. **How to use:** Open the collection notes drawer, enter the relevant instructions and click Save Notes. Use customer-arrival notifications only when the event is actually happening.
Collect History / Photos / Refresh	Inspect collection history or the available photo records. **How to use:** Use More > Collect History for past activity. Open a job's Photos tab where offered and Refresh after an upload. Stored records and permissions determine which photo actions are available.

> Collect from Showroom starts in Showroom Pick-Up; Collect from Warehouse starts in Collect Queue. Omni Stage Fully Packed moves either to Ready to Collect; Dispatched moves it to Collected.

Workflow: roster, logs and administration

Workflow | More menu; visibility depends on your role

Roster / Add Week / Add Person	Open the staff roster, create a week and add staff rows. **How to use:** Choose Roster, select the branch/week, then Add Week or Add Person. Complete the requested staff details. Use the correct branch; deleting a week affects more than one staff row.
Overview / Condensed View / Branches / Staff / Saved Reports	Change the roster view or open overview tabs. **How to use:** Use Overview where permitted, then choose Branches, Staff or Saved Reports. Condensed View reduces visible detail. Viewing an overview is separate from editing the roster.
Weekly Report / Download Report / View / Delete	Open/download a roster report or manage saved reports. **How to use:** Open Weekly Report and review it before Download Report. Use View for a saved report; Delete only the intended report. Report deletion and roster-row deletion are different actions.
Weekly Sales / Site Visit Stats	Open permitted sales reports or site-visit statistics. **How to use:** Choose the tool from More and set the relevant period/filters. Inspect results before sharing or downloading. Order invoice statistics now read stored Omni data; they only cover orders supplied to Workflow.
Omni Import Log / WeCom Log / Refresh	Inspect import activity and sent-notification history. **How to use:** Open the relevant log, search/filter where available and click Refresh to reload. Check the NZSO and event type. A sent log is useful evidence; an absent log or explicit failure needs investigation.
History menu entries / Roster History	Open previous events for the selected workflow area. **How to use:** Use Site Visit History, Quote Review History, Deliver History, Install History, Collect History, Follow-up History or Roster History. History is for inspection; it is not an Omni order-edit screen.
Admin Settings / Workflow Help Desk / Reply / Send	Open permitted settings or post a help-desk message. **How to use:** Use Admin Settings only with the required role. In Help Desk, describe the issue, NZSO and screen; use Reply for an existing message and Send to post. Do not include passwords or private API tokens in a help request.

> Shared Close, Cancel, Search, Refresh, Save, Delete and x controls have the same purpose across these tools, but always act on the currently open panel/item.

Automatic features & common questions

These behaviours do not need a separate button.

Automatic install fees	Choose a memo requiring installation. Supported pergolas match by model, mounting and area; blinds match by width. No-installation wording prevents automatic insertion. Review the resulting fee, quantity and price.
Automatic Available Stock	The table loads below Omni line items and excludes assembly/service rows. Use its Refresh control if the quote changed. NZ Availability was removed because it is no longer needed.
Omni routing and status sync	Ship goes to Deliver; Collect goes to Collect. Assembly also goes to Install. Fully Packed marks goods ready; Dispatched completes collection. Payment comes from Omni amounts. Reopen the sales order in Omni and refresh Workflow for current data.
Quote creator and shared reps	New site-visit Visit By defaults to the matching quote creator. Staff choices use the shared rep list where integrated. Check the selected name before booking or sending.
Shared customer photos	Link the correct NZSO number to the customer album. Existing site-visit photos should then appear without another upload. Refresh/reopen the album if you do not see the file.
Missing/slow button or action	Check that the latest Living Culture All-in-One script is enabled and the page is supported. Refresh the tab. Complete any required HubSpot step and allow relevant popups. Do not repeatedly click Clone or Send while an action is busy.
Job missing, status wrong, or notification missing	Search the NZSO in Jobs Overview and Deliver; include booked/delivered results. Reopen the Omni order and refresh Workflow. Check WeCom Log/history before retrying a send. Report the NZSO, screen, action and error through Help Desk.

> **Workflow:** living-culture-workflow.vercel.app
> **Important:** The HubSpot confirmation shows deal creation and order association separately. Read the result and use the linked NZSO record to check the association.
