Omni + Workflow + HubSpot

One NZSO number connects the order, the work and the sales relationship.

Omni

ORDER & MONEY

The source of order information.

- Quote or sales order
- Customer, products, rep & freight
- Amount paid & balance owing
- Stock and packing stage
- Fully Dispatched date & time

→

Workflow

PEOPLE & PROGRESS

The source of bookings and work actions.

- Site visits & quote reviews
- Delivery routes & collection cards
- Part delivered / delivered / collected
- Rep & install-team confirmations
- Install completion & sign-off

→

HubSpot

SALES STAGE & RELATIONSHIP

Receives the calculated job stage.

- Quote sent & Followed up
- Site Visit
- Part Paid / Paid
- Ready / Confirmed / Completed
- Status: Won after conversion

Omni → Workflow	**Automatic sync** Order snapshots update customer details, payments, freight routing and packing indicators. Shipping jobs belong on Delivery; collection jobs belong on Collect.
Workflow → Omni	**Open Omni + Save** Fully delivered or collected goods can set Omni to **Dispatched** and fill the completion date/time. The matching Omni order must be open with the script running. Save in Omni to retain those field changes.
Omni + Workflow → HubSpot	**Background sync** Saved order information and saved Workflow actions determine the deal stage. **Won is a Status value, not the same thing as Completed.**
Workflow → WeCom	**Notifications** Booking and work events notify the configured rep / warehouse / delivery / install channels. Part-delivery messages say that remaining items are still outstanding.

> **Jobs Overview is the shared view, not another order database.** Workflow shows all permitted jobs. Omni shows the current job's progress strip; its Jobs Overview button opens the full list.

What moves the HubSpot deal?

These are trigger rules, not mandatory steps. A job can skip stages that do not apply.

HUBSPOT STAGE / STATUS	WHAT TRIGGERS IT	IMPORTANT CONDITION
Quote sent	Use Omni's HubSpot Deal action for the quote.	Save As Draft + Quote Memo prerequisites apply.
Followed up	A second distinct SENT email is recorded in HubSpot with the exact NZSO in its subject.	Applies to quotes; checked during sync, not every Gmail click.
Site Visit	An active, non-completed site-visit card exists.	Temporary phase; does not override fulfilment stages beyond Paid.
Part Paid	Omni shows money received and a positive balance owing.	Saved sales-order payment data is required.
Paid	Omni's full-payment flag is true and no material balance remains.	Small rounding tolerance applies; credits do not block full payment.
Ready To Deliver/Pick up	Fully paid + Omni stage Fully Packed - WMS + a delivery or collection card.	This HubSpot rule does not separately require the stock indicator to be green.
Ready To Install	Installation/assembly required + fully paid + all goods onsite.	All delivery/collection complete, or all install cards explicitly show stock onsite where no goods cards exist.
Install Confirmed	Ready for install + every install-team confirmation ticked + required Sales confirmations ticked.	Sales confirmation is required only when enabled and required for that job. HubSpot's existing "Install Comfirmed" spelling is recognised.
Completed	Goods-only: all goods delivered/collected. Install jobs: every install completed and no goods outstanding.	Partial delivery never completes a job. See page 3 for payment/sign-off caveats.
Closed	An explicit cancelled / voided Omni job can set Closed; Sales can also close the deal.	Never because of inactivity. Closed HubSpot deals are protected from automatic reopening.

Quote → Sales order

Matching HubSpot **Status** → **Won**. Payment and fulfilment rules determine the separate Deal Stage.

→

Delivery + installation

Delivery does **not** finish the job. Paid + onsite → Ready To Install → required confirmations → Install Confirmed → install done → Completed.

New Enquiry / Wait On Customer are not inactivity automations.

Stage names describe progress; Omni keeps its own warehouse stages.

Corrections, colours & everyday checks

What to expect when a job changes, and what is not automatic.

Part delivered is not dispatched

Workflow records **Part Delivered** and can send a WeCom part-delivery message. Outstanding goods prevent full dispatch and completion. There is no separate Part Delivered HubSpot stage; the current stage is retained.

A green Packed dot is not a green card

Omni Fully Packed turns the packing indicator green. Delivery-card readiness shading requires **Paid + In Stock + Packed** together. HubSpot readiness uses paid + packed + a goods card, so these two visual rules are not identical.

Undo an accidental completion

Explicitly reversing delivered/collected or install/confirmation actions records a correction. HubSpot can then return to the applicable readiness or payment stage. A goods reversal can also clear Omni's dispatch date and restore the appropriate warehouse stage on the open order.

Ordinary refreshes do not move later-stage deals backwards.

Hold, New & freight changes

On Hold returns collection work to the queue and clears collection completion. An explicit New/queue correction also returns HubSpot to **Paid** or **Part Paid** using saved payment data.

Changing freight moves unfinished goods work between Delivery and Collect. Completed/part-delivered records may remain as history.

Site visits & quote reviews

Completing/removing the last active site visit releases its temporary HubSpot stage to Paid, Part Paid or Wait On Customer, unless the job already qualifies for a later stage.

Quote-review cards show their review status in Jobs Overview; approving a review is **not a separate HubSpot stage trigger**.

Installation scheduling warnings

Delivery booked after the linked install date turns the delivery card's Install link red. Installation confirmation needs the team tick and any enabled, required Sales tick. Assembly/installation prevents goods delivery alone from completing the HubSpot deal.

Completed is not the final accounting check

The current HubSpot Completed rule checks fulfilment, not an additional payment/sign-off gate. Jobs Overview can still flag **balance owing** or **missing install sign-off** after work is done. Clear those items before treating the job as fully finished.

Save, refresh & check the right source

Omni edits must be saved; unsaved payments may not appear elsewhere. The Omni progress/dispatch lookup runs about every **30 seconds while visible**. HubSpot updates run in the background and may need time and a view refresh.

Editing a HubSpot stage alone does **not** rewrite Omni or Workflow. New Enquiry has no general automatic trigger; Wait On Customer is also a site-visit fallback.

If the three views appear to disagree

Check the exact NZSO → save Omni → check payment, goods and install cards → allow the sync to finish → inspect Jobs Overview / the HubSpot sync report. Missing or ambiguous HubSpot stage/deal matches are reported instead of guessed. Payment Send to WeCom saves and verifies the payment first.
